

- bad support for colors
- bad support for dots (using `cdot` with an overset instead of `\dot`)
- underbrace with a combo of underset and overset ... Basically, instead of doing a `\underbrace{superset}_{subset}` a `\underset{subset}{\underbrace{superset}}`
- only the document part and no preamble so cannot be converted to pdf without adding back the template on top

One fixed occurrence : Typst reader: fix handling of `\overline`.

File `input.typ`:

```
$ \overline{x + y} $
```

Resulting `output.md`:

```
$$\underset{~}{x + y}$$
```

Expected `output.md`:

```
$$\overline{x + y}$$
```
